

CISO Security Assessment Tool

Turn Application Names into Security Briefs in Minutes

The Challenge

Security teams and CISOs are constantly asked to approve new tools

- Need **accurate, source-grounded** security snapshots
- Must make **fast decisions** with limited information
- Current process: **Days of manual research**

Goal: Move security from reactive firefighting to proactive enablement

Our Solution

AI-powered assessor that transforms minimal input into decision-ready briefs

Input: Product name, vendor, or URL

Output: CISO-ready trust brief with sources

Time: Minutes instead of days

Key Features:

Entity resolution and software classification

Security posture analysis with citations

Transparent **0-100 trust/risk scores**

Safer alternative recommendations

How It Works

4-Step Automated Process

01

Entity Resolution → Identify product and vendor

02

Classification → Categorize into software taxonomy

03

Data Gathering → Query 25+ security sources

04

Analysis → Generate comprehensive security brief

Result: Complete assessment with trust/risk scores, citations, and alternatives

Assessment Output

Executive Summary

- Trust Score: 65/100
- Risk Score: 45/100

Confidence level and rationale

Security Posture

- CVE trends and severity
- Vendor reputation
- Incident history
- Compliance status
- Data handling policies

Business Impact

For Security Teams

- Reduce assessment time from **days to minutes**
- Standardized evaluation process
- Faster, more confident decisions

For Organizations

- Accelerate software adoption
- Reduce security bottlenecks
- Improve risk management

Real Example: "Slack" assessment completed in minutes with full security brief

Challenge Requirements

All Requirements Met

1

Entity and vendor resolution

2

Software classification (868 categories)

3

Security posture summary with citations

4

Transparent 0-100 trust/risk scores with rationale

5

Safer alternative recommendations

6

CLI, REST API, and Web UI delivered

7

Local cache with timestamps
